Mohammad Atikul Hoque Showrav

Aspiring GRC Specialist & Cybersecurity Analyst

Aspiring GRC Specialist and Cybersecurity Analyst, currently studying Software Engineering at Daffodil International University (DIU). Ongoing knowledge building in internal audit and compliance support with a strong technical foundation in defensive security (TryHackMe Top 7%). Actively building expertise in NIST CSF, ISO 27001 and real-world IT security audits.

Training and Certifications

Pre-Security Certificate: TryHackMe (Issued Aug 2026, Credential ID: THM-3WADIEXWB8) – Hands-on foundational labs covering network security, Linux administration, and web fundamental concepts.

Cisco Introduction to Cybersecurity: Cisco Networking Academy (Issued May 2026) – Fundamental principles of network defense, data privacy, and security practices.

Ongoing Studies & Practical Training:

GRC & Compliance Frameworks: Actively studying NIST CSF 2.0 and ISO 27001 implementation, risk management, and security audit procedures.
Defensive SOC Analyst Pathway: Hands-on training on TryHackMe (World Ranking: Top 7%) covering log analysis, network traffic analysis, and incident response.
Cybersecurity 101 Documentation: Maintaining open-source notes and write-ups on cryptography, network defense, and system security operations.

Cyber Awareness for Young Minds Volunteer Certificate: Cyber Security Centre, DIU (Issued Sep 2026) – Organized and delivered cyber hygiene and awareness sessions.

Software Testing with Generative AI: SimpliLearn (Issued Mar 2026, Credential ID: 9932347) – Applied Generative AI techniques in software quality assurance and testing.

Practical Projects

AI-Assisted Web & Interface Prototyping (AI Vibe Coding): Developed interactive web projects and thematic interfaces (including a dedicated Yunus Emre cultural webpage and cyber-themed dashboards) leveraging AI-assisted coding workflows and rapid prototyping.

SOC Simulation & Alert Analysis: Engaged in hands-on defensive security practice by simulating real-world Security Operations Center (SOC) environments, focusing on threat alert triage, log

documentation and incident analysis.

Enterprise NIST Assessment: Conducted an enterprise-wide NIST cybersecurity assessment as part of structured GRC mastery training.

Platform UI/UX & Feature Enhancement (Ukil): Authored a comprehensive technical report and feature proposal for the Ukil platform, recommending critical improvements including a dedicated Bangla language toggle for local accessibility, AI/chatbot integration for customer support, template-card lawyer profile redesigns with review systems and direct communication/appointment workflows.

Researcher *(Collaborative Research with Washington University of Science & Technology , WUST)*

Topic: Explainable AI for Trustworthy Automation in Security Operations Center (SOC): Reducing Analysts Burnout & Fatigue and Improving Critical Infrastructure Incident Response.

Description: Collaborating on designing Explainable AI frameworks to mitigate SOC analyst alert fatigue and optimize incident response workflows for critical infrastructure security.

Professional Experience

Ukil - Law service Provider, Banani, Dhaka — February 2026 — October 2026

Tech Intern

- Developed comprehensive technical enhancement reports and UI/UX recommendations for the platform, focusing on local accessibility (Bangla language toggle) and automated support.
- Proposed template-card based lawyer profile layouts, review systems, and secure direct communication workflows to improve user engagement.
- Contributed to internal discussions and evaluations regarding platform security, feature expansion, and compliance workflows.
